(54) Title: A PORTABLE ELECTRONIC PENILE ANEURYSM ENHANCER

(57) Abstract: The present invention is related to an electronic penile aneurysm enhancer and more specifically, a portable electronic penile aneurysm enhancer having a small size to be easily carried around, and by electronically performing expansion and contraction movement of penile muscles, the enhancer invigorates the blood flow movement of spongy body so as to recover the narrowed blood vessels to be normal or so as to penetrate the blocked blood vessels. The present invention comprises a body portion (2); a piston pumping portion (6) provided inside the body portion (2) for pumping to move air through an inlet valve port (12) and an outlet valve port (14); a first electronic three way valve (10) connected to the inlet valve port (12) of the piston pumping portion (6) for converting flow path so as to suck air in; a second electronic three way valve (20) connected to the outlet valve port (14) of the piston pumping portion (6) for converting flow path of the sucked-in air, wherein the penile/male member is expanded and contracted by the first and second electronic three way valves (10, 20). The present invention also comprises a circular enhancing tube (30) having a penile insertion hole (42) and a penile sealing section (40) for expanding and contracting the penis by operating the first and second electronic three way valves (10, 20), and a central control section for controlling the first electronic three way valve (10), the second electronic three way valve (20) and the piston pumping portion (6).
